

			Usability								Deployability					Security											
Category	Scheme	Ref	Memorywise-Effortless	Scalable-for-users	Nothing-to-Carry	Physically-Effortless	Easy-to-Learn	Efficient-to-Use	Infrequent-Errors	Easy-Recovery-from-Loss	Accessible	Negligible-Cost-per-User	Server-Compatible	Browser-Compatible	Mature	Non-proprietary	Resilient to physical observation	Resilient to targeted Impersonation	Resilient to Throttled Guessing	Resilient to Untrotted Guessing	Resilient to Internal Observation	Resilient to Leaks from Other Verifiers	Resilient to Phishing	Resilient to Theft	NO Trusted Third Party	Requiring Explicit Consent	Unlinkable
DLT + Mobile	deedID																										
(Incumbent)	Web passwords																										
Password managers	Firefox																										
	Lastpass																										
Proxy	URRSA																										
	Imposter																										
Federated	OpenID																										
	Microsoft Passport																										
	Facebook Connect																										
	BrowserID																										
Graphical	OTP over email																										
	PCCP																										
Cognitive	PassGo																										
	GIDsure (original)																										
	Weinshall																										
Paper tokens	hopper Blum																										
	Word Association																										
	OTPW																										
Visual crypto	S/KEY																										
	PIN+TAN																										
	PassWindow																										
Hardware tokens	RSA SecurID																										
	Yubikey																										
	Ironkey																										
	CAP reader																										
	Pico																										
Phone-based	Phoolproof																										
	Cronto																										
	MP-Auth																										
	OTP over SMS																										
Biometric	Google 2-step																										
	Fingerprint																										
	IRIS																										
Recovery	voice																										
	Personal knowledge																										
	Preference-based																										
	Social re-auth																										

= offers the benefit; = almost offers the benefit; *no circle* = does not offer the benefit.
 = better than passwords; = worse than passwords; *no background pattern* = no change.
 We group related schemes into categories. For space reasons, in the present paper we describe at most one representative scheme per category; the companion technical report [1] discusses all schemes listed.
