CTAP2

Client to Authenticator
Protocol (CTAP)

**Roaming
Authenticator**

**On-device
Authenticator**

There is a choice of storing
Passkeys on an external device
(known as roaming authenticator)
or storing it on the device that the
authentication is happening on.

Client

e.g. browser

Client
Device

e.g. laptop
or phone

Client Platform

Client platform is a combination of
the client and the client device.
This figure assumes it is a laptop,
but it can be any other user device,
such as a tablet.
